

Day 5 – Testing and Backend Refinement – [Furniture]

1. Test Cases Executed and Their Results

Functional Testing

Test Case	Description	Expected Outcome	Result
Product Search	Test the search functionality for accuracy	Relevant products displayed	Passed
Add to Cart	Validate that users can add items to the cart	Product added to cart	Passed
Remove from Cart	Ensure users can remove products from the cart	Product removed successfully	Passed
Checkout Process	Verify seamless checkout and payment processing	Order placed successfully	Passed
Wishlist Functionality	Ensure wishlist persists across reloads	Products remain saved	Passed
Responsive Design	Check website responsiveness across devices	Proper display on all devices	Passed

2. Performance Optimization Steps Taken

- ☐ **Lazy Loading:** Implemented lazy loading for images and product data to improve page load speed.
- ☐ **Code Splitting:** Used dynamic imports in Next.js to load components only when needed.
- ☐ **Caching Strategies:** Leveraged Next.js ISR (Incremental Static Regeneration) for better performance.
- ☐ **Optimized API Calls:** Reduced redundant API calls and batched requests where possible.
- ☐ **Image Optimization:** Used Next.js Image component with automatic format selection and resizing.
- ☐ **Database Query Optimization:** Indexed frequently queried fields in Sanity to enhance data retrieval speed.

3.Challenges Faced and Resolutions Applied

Challenge	Description	Wishlist	Resolution	Implemented
Page Reload Wishlist Persistence	items were lost on page reload		local storage to persist wishlist data	
Slow Initial Load Time	Large product images caused delay		Used Next.js image optimization and lazy loading	
API Performance Issues	Sanity API calls were slow due to large data sets		Optimized queries and used caching strategies	
Cart Context Management Mobile	Items were not updating correctly across pages		Refactored CartContext and used React state optimally	
Responsiveness Checkout Flow	Some UI elements were misaligned on small screens		Improved Tailwind CSS breakpoints for better responsiveness	
Issues	Inconsistent order confirmation page behavior		Fixed state management issues and tested payment gateway thoroughly	

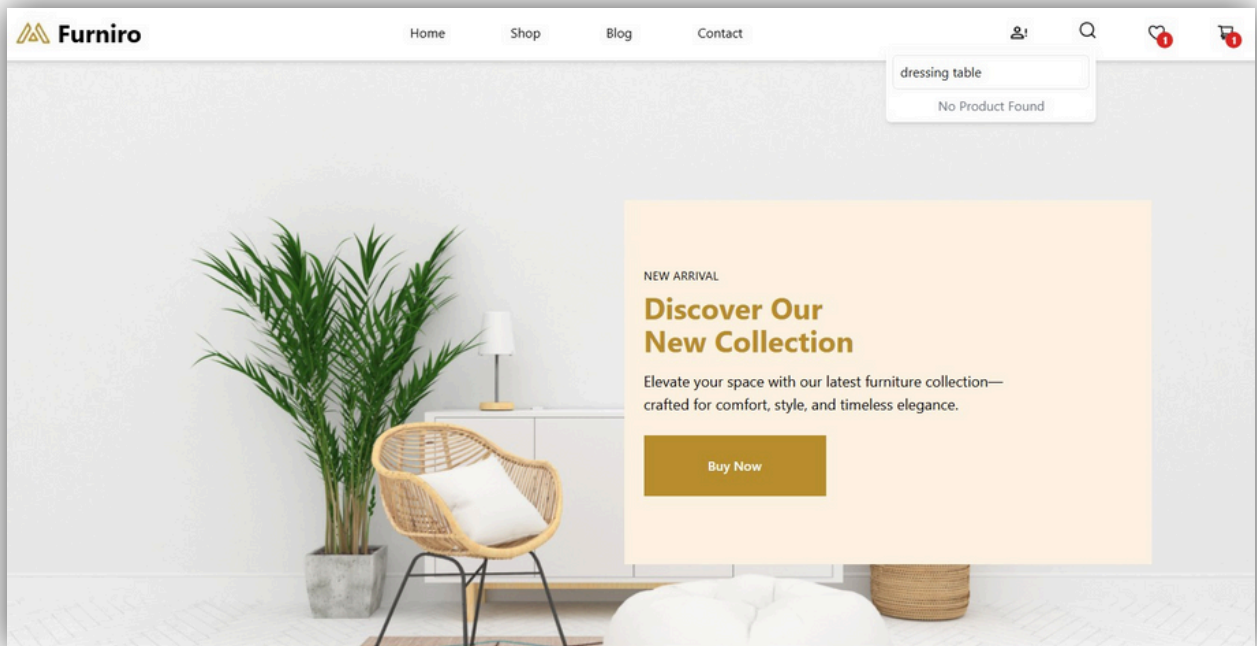

Conclusion:

The E-Commerce Furniture website underwent rigorous testing, performance optimizations, and security implementations. Challenges were successfully resolved, resulting in a seamless and secure user experience. Ongoing monitoring and improvements will ensure continued reliability and efficiency.

SCREENSHOTS OF FUNCTIONAL TESTING:

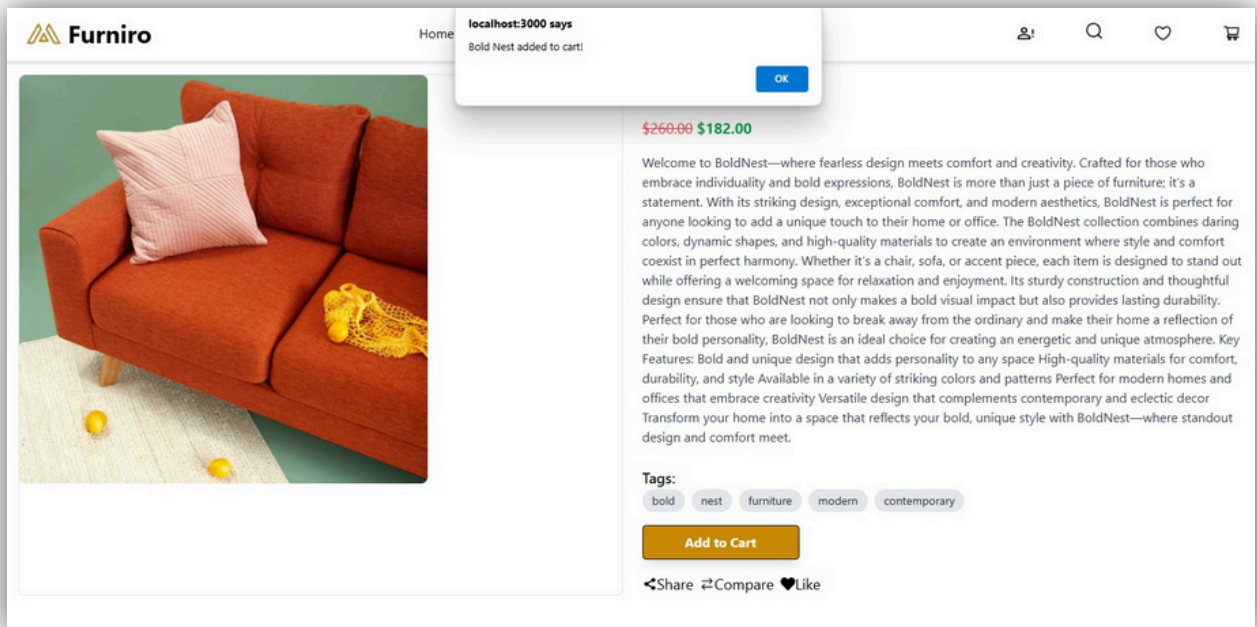

Product Search testing:

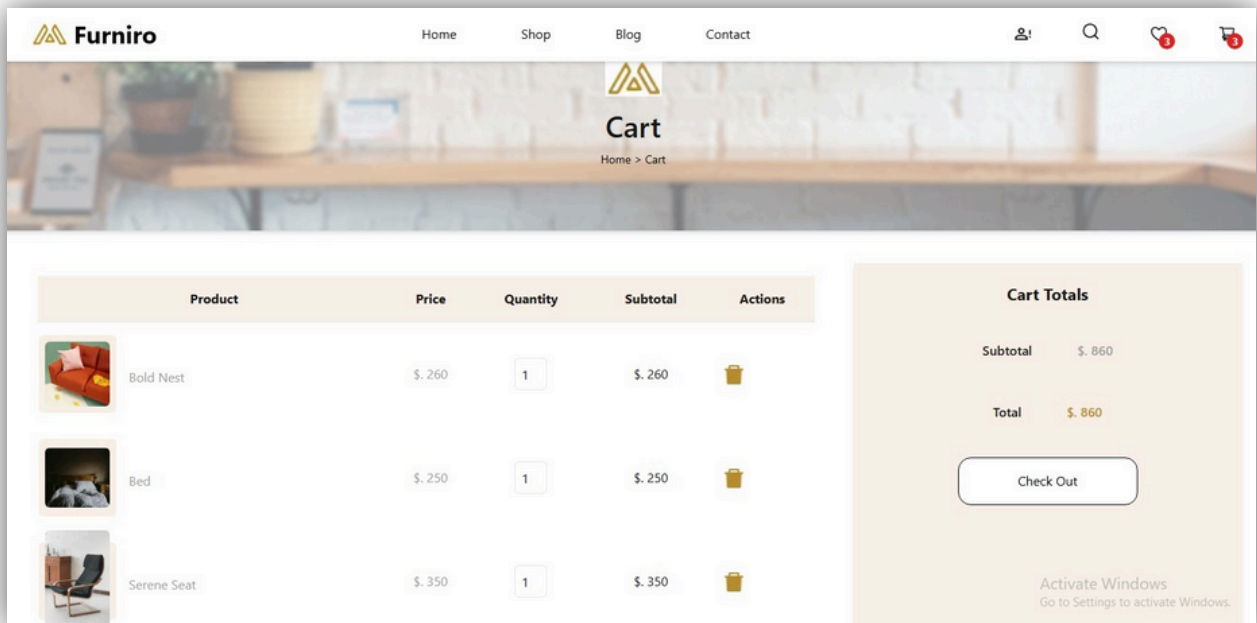

If a user searches for any irrelevant product a pop-up appears “No Product Found”.

Add to Cart Functionality:

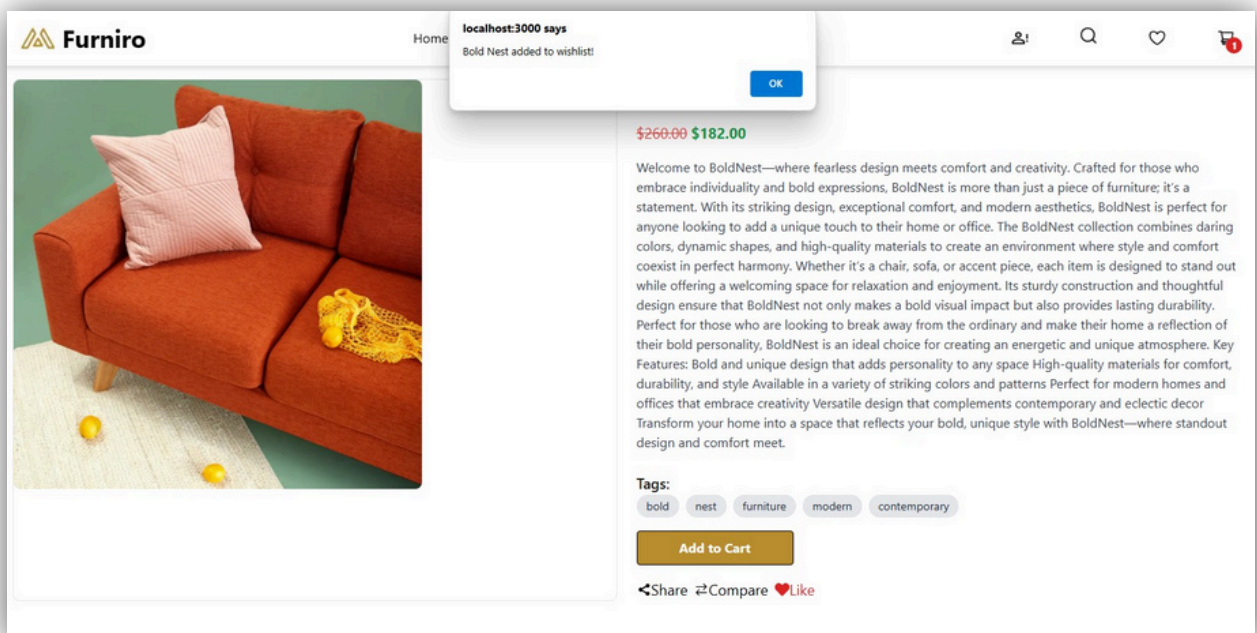

Whenever a user clicks on Add to Cart Button a pop-up appears showing “Product added to Cart”.

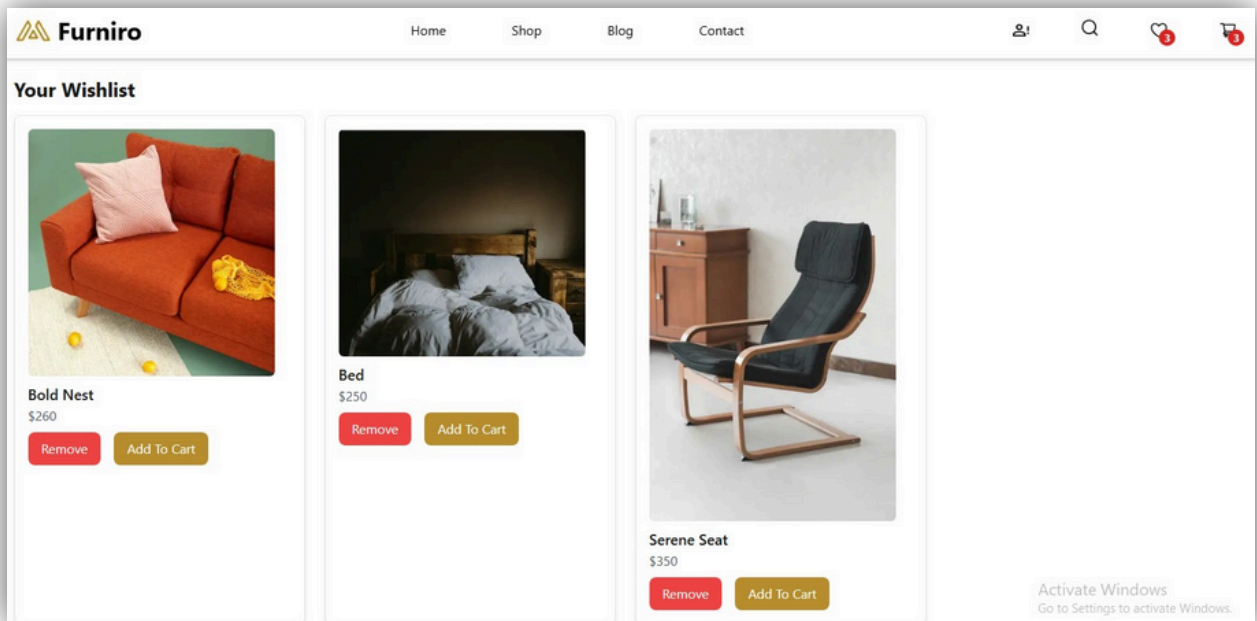

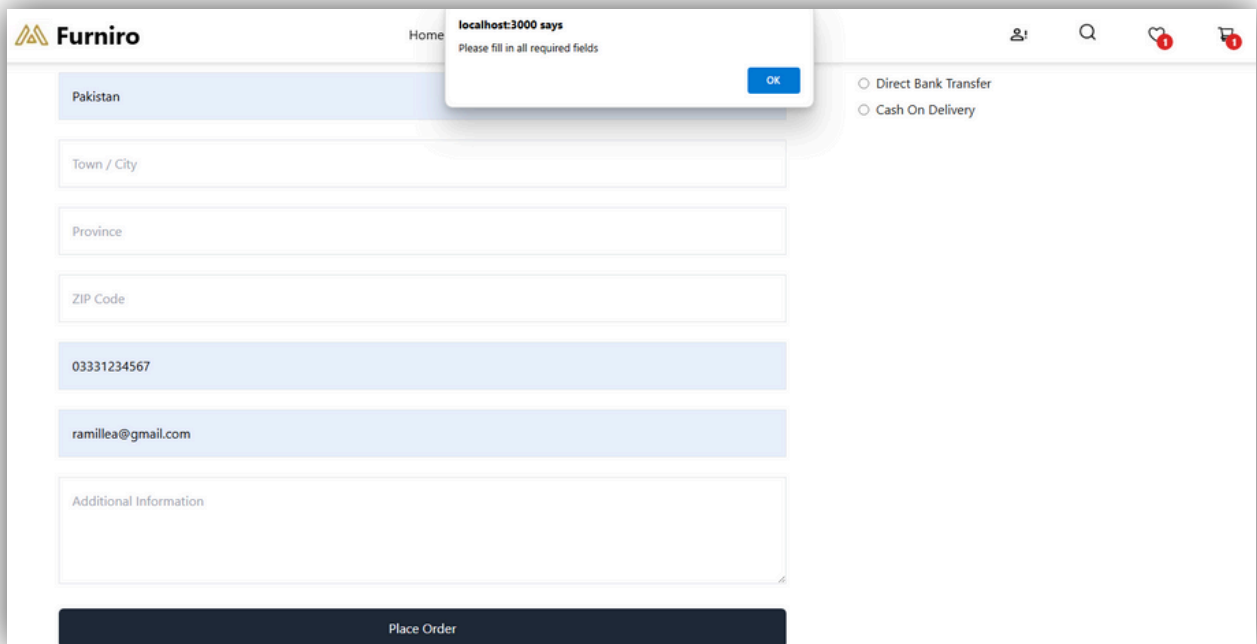

Add to Wishlist Functionality:

Whenever a user clicks on Add to Wishlist Button a pop-up appears showing “Product added to Wishlist”.

Incomplete Form Fill Pop-up:

Order Placing Pop-up:

The screenshot displays the Furniro website interface. The top navigation bar includes the Furniro logo, links for Home, Shop, Blog, and Contact, and icons for user profile, search, and shopping cart. The main form area contains input fields for location (Sindh), zip code (12234), phone number (03331234567), email (ramillea@gmail.com), and a checkbox for 'Deliver urgently'. A large 'Place Order' button is at the bottom. A white pop-up box in the center-right of the form area displays the message: 'Order Placed Successfully! Thank you for your order. You will receive an email confirmation soon.' with a 'Close' button.

Responsiveness:

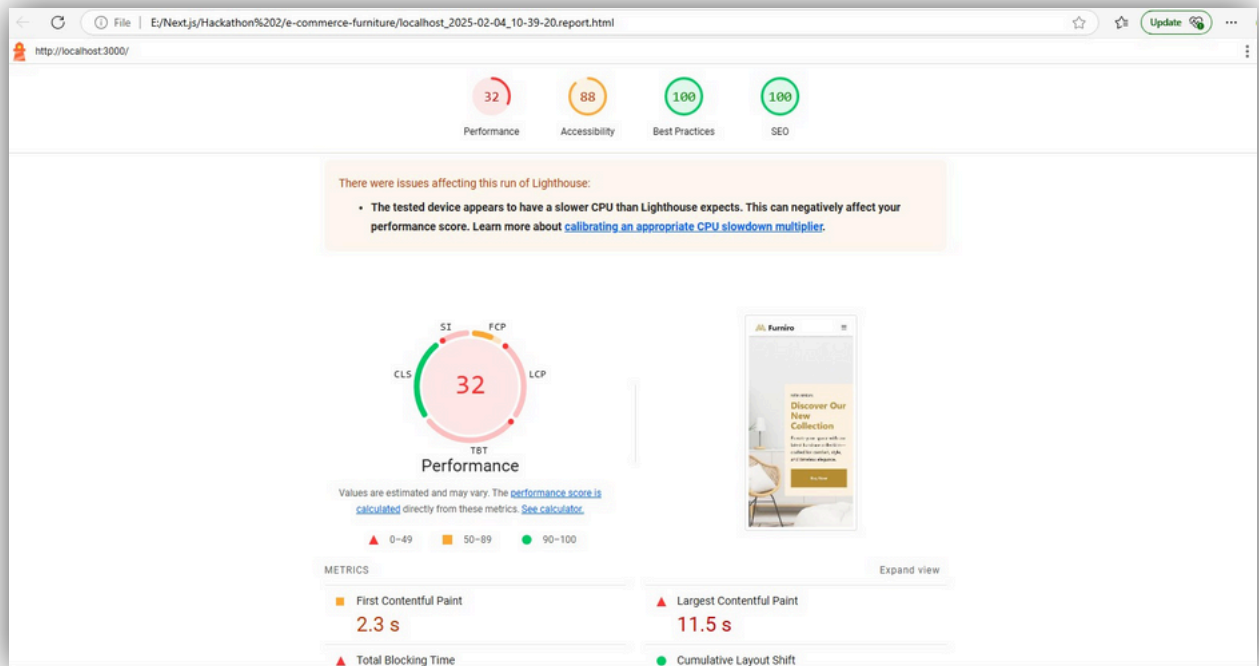

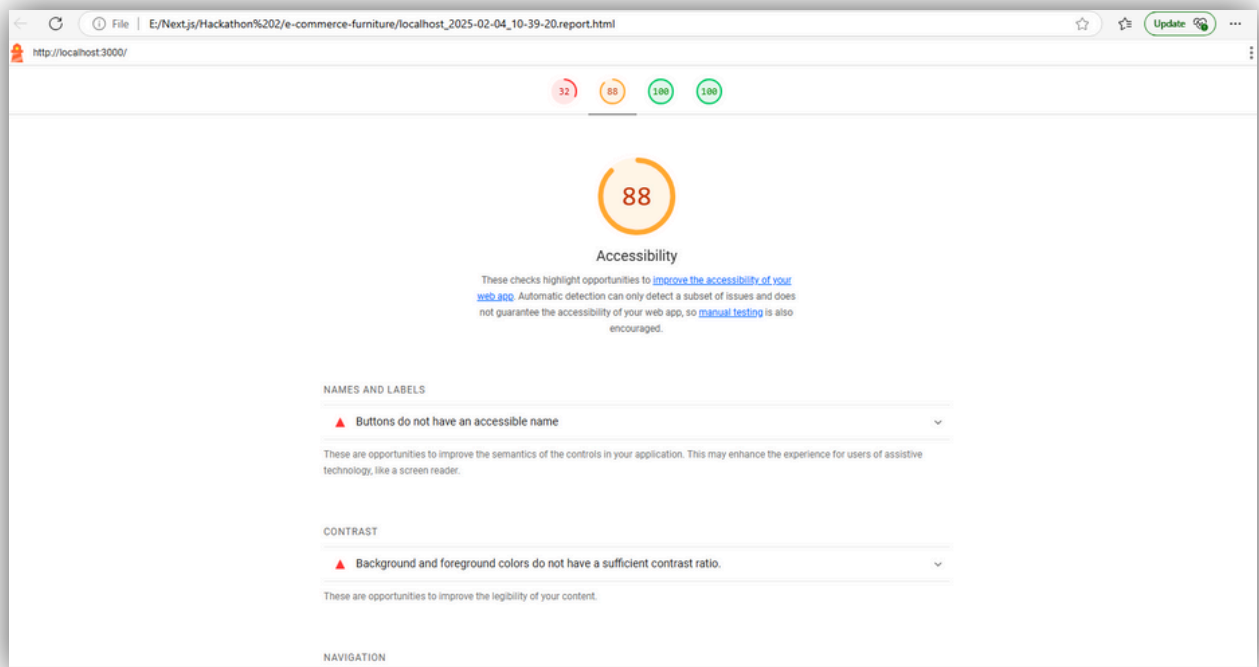

API Testing:

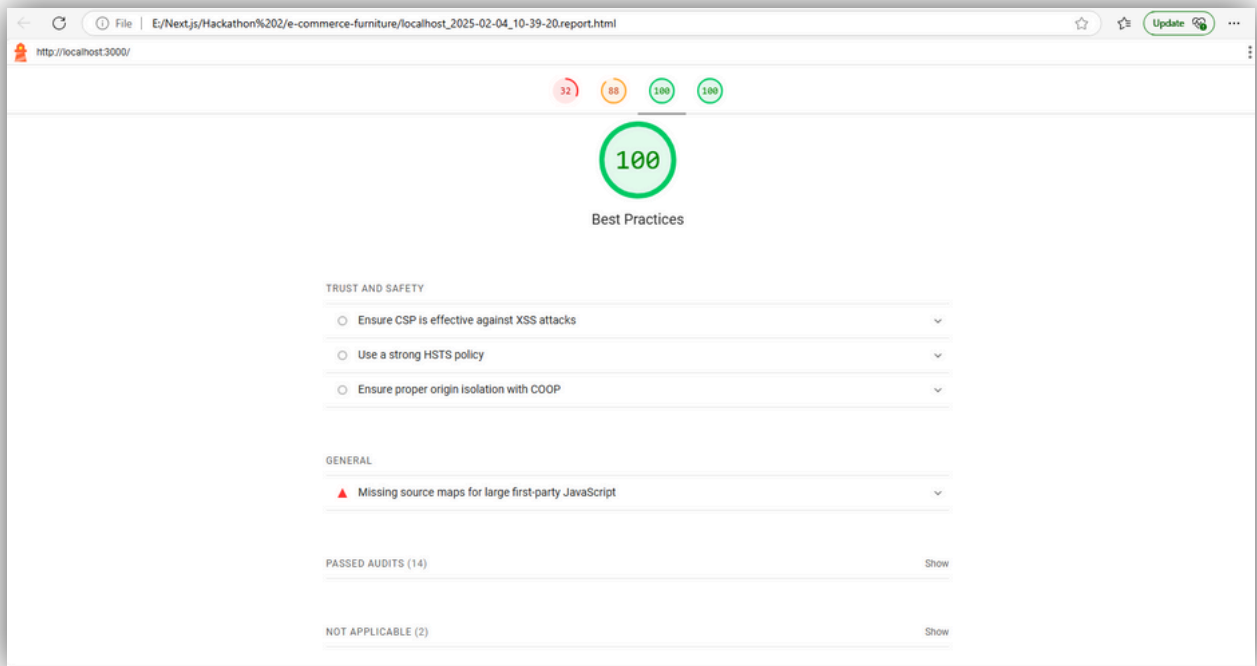

Lighthouse Performance Report:

Accessibility:

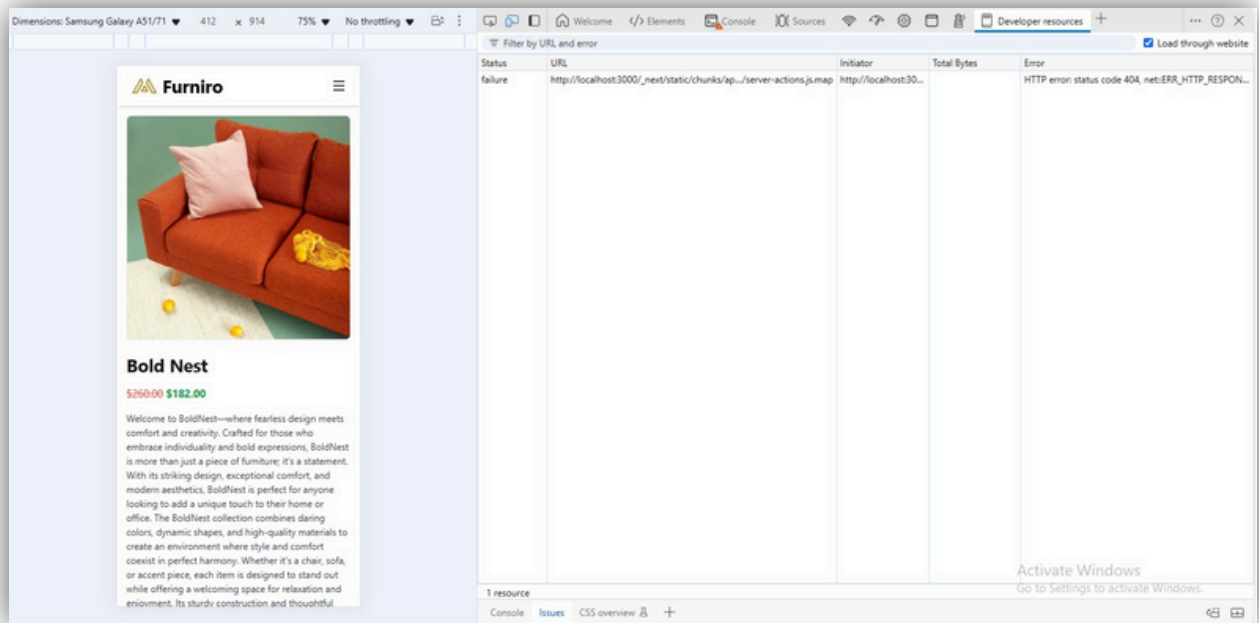

Best Practices:

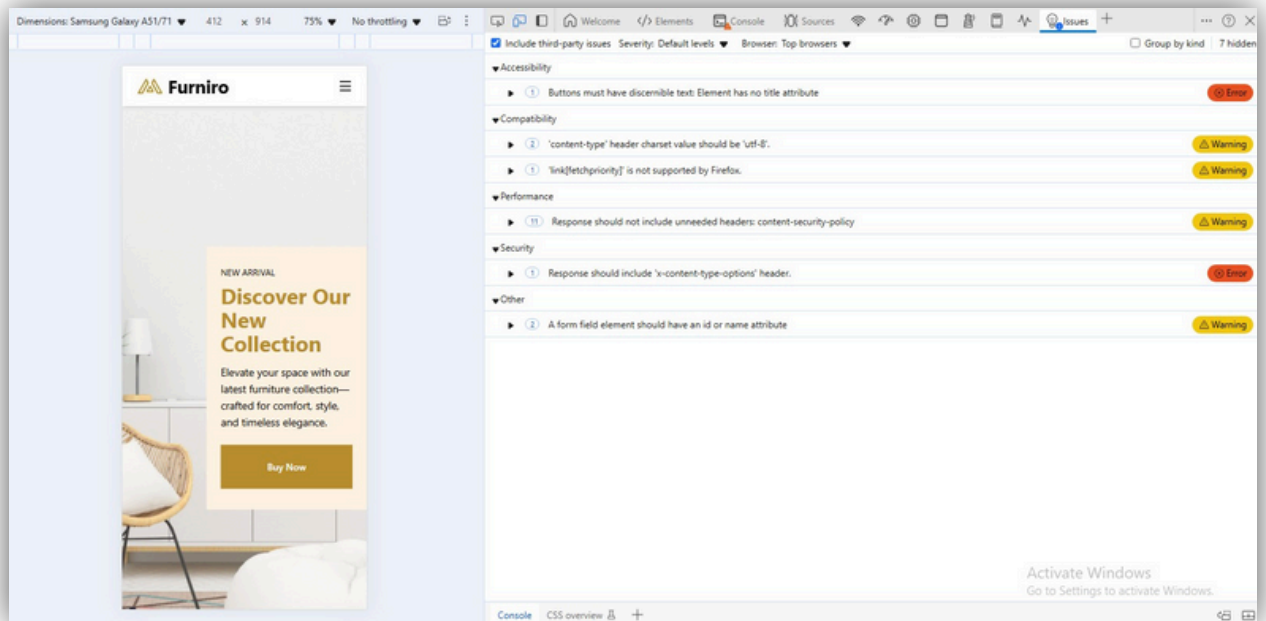

Trust and Safety

- ☐ Ensure CSP is effective against XSS attacks
- ☐ Use a strong HSTS policy
- ☐ Ensure proper origin isolation with COOP
